

EVERSHOP TEST REPORT

E-Commerce Demo Platform — System Test Summary

Product Name: EverShop (E-Commerce Demo)

Version: 1.0

Report Date: April 2026

Test Period: November 2025 – February 2026

Prepared By: Ogunsuada Joseph

Reviewed By: Mr. Kingsley Udoh

Status: LIVE (DEMO)

Section 1: Introduction and Scope

1.1 Document Purpose

This Test Summary Report documents the planning, execution, and outcomes of system-level testing performed on the EverShop e-commerce demo platform. It provides stakeholders with a consolidated view of test coverage, results, and defects identified to support release decisions.

1.2 Project/Product Identification

- **URL:** <https://demo.evershop.io>
- **Product Name:** EverShop (E-Commerce Demo)
- **Version:** 1.0

1.3 Scope of Testing

- **Front-end Storefront:** Product listing, detail pages, shopping cart, and checkout flow.
- **Account Management:** Registration, login, and order history.
- **Automation/API:** Playwright E2E journeys and Postman API endpoint validation.
-
- **Out of Scope:** Production payment funds, load/stress testing, and multi-language support.

1.4 Test Period

Phase	Start Date	End Date
Planning & Preparation	30 Nov 2025	12 Dec 2025
Design & Development	13 Dec 2025	28 Dec 2025
Implementation	28 Dec 2025	05 Jan 2026
Execution	06 Jan 2026	18 Jan 2026
Reporting & Closure	19 Jan 2026	04 Feb 2026

Section 2: Test Objectives and Strategy

2.1 Test Objectives

- 1. Validate all functional requirements from EverShop PRD (v1.0).
- 2. Verify the end-to-end customer journey (browsing to confirmation).
- 3. Confirm Admin Panel CRUD operations and API response accuracy.
- 4. Ensure cross-browser compatibility and responsive UI/UX.

2.2 Exit/Success Criteria

Success Criterion	Target	Status
Test case pass rate	≥ 95%	ACHIEVED
Critical API endpoints tested	100%	ACHIEVED
API response time (P95)	< 500ms	ACHIEVED
Automation coverage	≥ 70%	ACHIEVED
Zero critical defects open	0	ACHIEVED

Section 3: Test Execution Summary

3.1 Test Case Metrics

Test Area	Total	Pass	PWC*	Fail	Out-of-Scope	% Pass
Homepage	30	25	2	3	0	90%
Product Catalog & Search	32	29	2	1	0	97%
Product Detailed page	13	10	1	1	1	92%
Shopping Cart	19	18	0	0	1	95%
Checkout Process	37	33	1	3	0	92%
User Registration & Login	14	11	0	3	0	79%
Customer Account	7	6	0	1	0	86%
Playwright E2E Automation	19	14	-	5	-	74%
TOTAL	171	146	6	17	2	88%
*PWC = Pass with Comment						

Section 4: Bug Analysis

4.1 Overall Bug Count

Category	Critical	High	Medium	Low	Total
Opened	0	0	1	0	1
Resolved	0	0	0	0	0
Outstanding	0	0	0	0	0

4.2 Bug Severity Distribution

BUG-ID	Description	Affected Area	Status
EVR_BUG-001	Search auto-suggestions incorrect output	Search Bar	OPEN

Section 5: Environment and Infrastructure

- **Primary Env:** <https://demo.evershop.io>
- **Browsers:** Chrome 90+, Firefox 88+, Safari 14+, Edge 90+
- **Devices:** Laptop(windows 11)
- **Tools:** Playwright (JS), Postman, Microsoft Excel/Word, Chrome DevTools.

Section 6: Deviations and Lessons Learned

6.1 Variances from Plan

- **TypeScript Migration:** Playwright framework was implemented in JavaScript; TypeScript migration was deferred (Low impact).
- **E2E Workaround:** Used URL parameters (?color=3) to handle unstable UI variant selectors on the demo site.

6.2 Lessons Learned

- **Wait Strategy:** Exclusively use dynamic waits (toBeVisible) to avoid flakiness.
- **Regex Locators:** Use case-insensitive regex for cross-browser text matching.
- **Timeouts:** Elevate timeouts (90s) for public demo environments to account for latency.

Section 7: Overall Assessment & Recommendation

7.1 Quality Assessment

The EverShop demo platform demonstrates solid functional stability. All primary customer-facing workstreams (Storefront, Cart, Checkout) perform as specified.

7.2 Release Recommendation: NO GO

- **Summary:** Despite the recommendation for a "demonstration" release, the current build fails to meet 3 out of 4 core quantitative Exit Criteria. Releasing in the current state poses a high risk to functional stability and user experience, particularly regarding core flows like Login and Automation.
- **Exit criteria gap analysis**

Exit Criteria	Required	Actual	Status
Test cases passed	95%	88%	FAIL
Automation pass rate	90%	74%	FAIL
All bug report cleared	100%	0%	FAIL
Test Summary/E2E Report	Provided	Provided	PASS

7.3 Post-Release Recommendations

1. Resolve search auto-suggestion latency issues.
2. Expand automation coverage to 85%+ including edge cases.
