1. INTRODUCTION & GOALS

1.1. Problem Statement

Many businesses struggle with rigid, monolithic e-commerce platforms that are slow, difficult to customize, and don't provide a modern customer experience out of the box. Developers need a flexible, developer-friendly stack to build unique storefronts without limitations.

1.2. Vision

To provide a powerful, open-source, headless e-commerce platform that offers unparalleled flexibility and a modern tech stack for developers, combined with a seamless and intuitive shopping experience for end-customers.

1.3. Goals & Objectives

- For Merchants: Increase conversion rates with a fast, modern storefront. Simplify product and order management.
- For Developers: Drastically reduce development time with a decoupled, API-first architecture using familiar technologies (Node.js, React).
- For the Business (EverShop): Become a leading open-source alternative in the headless e-commerce space, driven by community adoption and a potential commercial ecosystem.

2. SCOPE

2.1. IN-SCOPE

- Front-end storefront (product listing, product detail, checkout)
- Admin panel demonstration (product management, order management)
- Demo user accounts
- Sample data (products, categories, collections)
- Payment simulation or sandbox payment setup
- Theme / UI customization to show theming capabilities

2.2. OUT OF SCOPE

- Production-level payment integrations for real money (the demo will use sandbox or dummy payments)
- High-traffic scaling beyond demonstration usage (not meant for real business use)
- Multi-language content (if not yet fully supported).

3. USER PERSONAS

3.1. Dev Dylan (Developer):

- Needs: A flexible, API-driven backend. Clean, extensible code. Modern frontend framework (React). Easy deployment and customization.
- Frustrations: Legacy platforms, poor documentation, vendor lock-in.

3.2. Merchant Maria (Store Owner):

- Needs: An easy-to-use admin panel to manage products, orders, and customers. A beautiful storefront that converts visitors. Reliable and fast.
- Frustrations: Clunky admin interfaces, slow page loads, limited design control.

3.3. Customer Chris (Shopper):

- Needs: Find products easily, a smooth shopping cart & checkout process, trust in the payment system, and order tracking.
- Frustrations: Complicated checkout, slow websites, and not being able to see product details clearly.

4. USER STORIES/ USE CASES

- As a **developer**, I want to try adding a new product from the admin panel so I can understand how product management works.
- As a **potential business owner**, I want to go through the checkout on the demo store so I can evaluate the user experience.
- As a **technical lead**, I want to inspect GraphQL endpoints so I can decide if EverShop's API is flexible enough.

5. FEATURES AND REQUIREMENTS

5.1. Epic 1: Customer-Facing Storefront

5.1.1. Feature: Product Catalog & Discover

Requirements:

- FR-1.1: Display products in a grid/list view on category pages.
- FR-1.2: Implement a robust search bar with auto-suggestions.
- FR-1.3: Provide filtering by price, category, and product attributes (e.g., color, size).
- FR-1.4: Sort products by price, name, and newest.

5.1.2. Feature: Product Detail Page (PDP)

Requirements:

- FR-2.1: Display a product image gallery with zoom functionality.
- FR-2.2: Show product title, price, and description.
- FR-2.3: Allow selection of product variants (e.g., Size, Color).
- FR-2.4: Display customer reviews and ratings.
- FR-2.5: "Add to Cart" and "Add to Wishlist" buttons.

5.1.3. Feature: Shopping Cart & Checkout

Requirements:

- FR-3.1: Persistent mini-cart and full cart page.
- FR-3.2: Ability to update quantities and remove items from the cart.
- FR-3.3: Multi-step checkout (Shipping -> Payment -> Review).
- FR-3.4: Support for both guest checkout and user registration.

- FR-3.5: Integration with multiple payment gateways (Stripe, PayPal).
- FR-3.6: Calculate taxes and shipping costs.

5.1.4. Feature: Customer Account

Requirements:

- FR-4.1: User registration and login.
- FR-4.2: Dashboard to view order history and details.
- FR-4.3: Manage saved shipping addresses.
- FR-4.4: Access personal wishlist

5.2. Epic 2: Merchant Admin Panel

5.2.1. Feature: Product Management

Requirement:

- FR-4.1: User registration and login.
- FR-4.2: Dashboard to view order history and details.
- FR-4.3: Manage saved shipping addresses.
- FR-4.4: Access personal wishlist.

5.2.2. Feature: Order Management

Requirement:

- AR-2.1: View all orders in a list with statuses.
- AR-2.2: Update order status (e.g., Processing, Shipped, Completed).
- AR-2.3: View detailed information for a single order.

5.2.3. Feature: Customer Management

Requirement:

- AR-3.1: View the list of registered customers.

- AR-3.2: View customer details and order history.

6. NON-FUNCTIONAL REQUIREMENTS

- **Performance:** Page load times (LCP) should be under 2.5 seconds on average.
- **Scalability:** The platform should handle a minimum of 10,000 concurrent users.
- **Security:** Must be PCI-DSS compliant for handling payments. Regular security patches.
- **Usability:** The admin panel should be intuitive enough for a non-technical user to manage products and orders within 30 minutes of use.
- **Accessibility:** Storefront should strive for WCAG 2.1 AA compliance

7. ASSUMPTIONS & CONSTRAINTS

- Assumption: Users exploring the demo are mostly technical or business evaluators.
- Assumption: Demo store will not have real financial transactions.
- Constraint: Hosting costs must be minimal (since it's a demo).
- Constraint: Storage space for demo data is limited; the product catalog should be realistic but small.

8. DEPENDENCIES

- EverShop core platform (open-source)
- Database (PostgreSQL)
- Hosting / server infrastructure for the demo site
- GraphQL API access
- Theme modules or widget modules (for storefront design)

9. ACCEPTANCE CRITERIA

- A visitor can browse categories and products.
- A visitor can add a product to the cart, go to checkout, and simulate placing an order.
- Admin can login with the given demo credentials.
- Admin can add a new product, edit it, and delete it.
- Sample data is visible when a new user first visits the demo.
- No real payment is required (sandbox or dummy payment).

- The store pages load within acceptable performance limits.

10. SUCCESS METRICS (KPIs)

- Number of demo store "sign-ups" (people who log in as admin to test).
- Demo store bounce rate (how many leave after landing).
- Rate of "installed from demo" (how many go from demo → install it themselves).
- Feedback from users (via a survey) on how easy/useful the demo was.
